

# CANINE FOOD ALLERGY & FOOD INTOLERANCE

Food allergy and food intolerance are reactions to a food or ingredient that is normally considered harmless. In people, allergic reactions can be caused by foods such as shellfish or peanuts. In pets, a common protein, such as beef or dairy, is often the trigger. Eating foods that cause an allergic reaction can result in gastrointestinal (GI) upset and/or skin inflammation that causes the pet to itch and scratch. Signs can appear suddenly in pets, even after years of enjoying the same food.

## SIGNS CAN INCLUDE:

- ☐ Year-Round Itching and Scratching
- ☐ Chronic/Recurring Ear Infections
- ☐ Vomiting
- ☐ Diarrhea
- ☐ Excessive Gas

**If your dog displays any of these signs**, especially both dermatological and gastrointestinal, his troubles may lie with food intolerance or food allergies.

**Talk to your veterinarian about food intolerance or allergies and ask how a hydrolyzed diet could help your pet.**

MAIL-IN REBATE

Expiration Date: 12/31/2014

Limit one request per individual or address
